Business Information Solutions

How do you manage and protect electronically stored information from desktops, workstations, laptops and social media?

Are you concerned about sanctions and liability risks for mismanaging electronic evidence?

Most organizations do not have the in-house resources and management know-how to affordably conduct a forensic analysis of electronically stored information (ESI).

PARTNER WITH THE RIGHT PEOPLE

To learn more about Ricoh Managed Services and how we can help you identify and address opportunities to enhance your organization's document management, contact us at [1-866-246-4442](tel:1-866-246-4442) or email us at managementservices@ricoh.ca

Maximize data integrity, minimize risk

Integrity is the foundation for any legal system. As a result, evidence for litigation must remain uncompromised — even when it's in electronic form on desktops, laptops, mobile devices and social media.

Millions of dollars are potentially at stake. Compromised evidence may be inadmissible in court, which can directly affect the outcome of litigation. Unfortunately, few organizations have the capability to handle a key component of the eDiscovery process – data forensics. They lack the data forensics process management skills, the personnel, the financial resources or the advanced technology to manage this enormous task alone.

RICOH® offers data forensics solutions to help ensure you're protected as we identify and collect electronically stored information (ESI) with speed and reliability. We simplify the process, so you can concentrate on your core tasks. Ricoh's experienced Data Forensics Solutions team is certified and uses state-of-the-art technology, forensically sound tools and proven procedures to help clients navigate every step of the discovery and ESI investigative lifecycle — including tracking and accountability — for low cost and minimal risk.

Data Forensics Solutions

Consult with the experts

Turn to Ricoh for consultation that ensures fast, reliable, comprehensive and defensible data forensics for the collection of ESI. Our Data Forensics Solutions combine with Ricoh Forensics to offer more than 60 years of experience serving corporate, legal and professional organizations along with a proven legacy of innovative technology and support. Ricoh Forensics is an industry leader, and your trusted advisor, with teams skilled in performing digital investigations.

Discover a defensible, proven way to collect data

Ricoh offers customizable ESI collection and management options to accommodate every client's specific requirements, including:

- A forensic remote data collection tool – Remlox™
- Onsite forensics experts
- Remote online collection and
- Remote collection at a certified Ricoh data forensics facility

The Remlox remote collection tool is an inexpensive and defensible method for acquiring ESI on hard drives with a documented chain of custody. Ricoh deploys the solution directly to client sites, which eliminates the need for expensive on-site forensics collection. With Remlox, users can complete a sector-by-sector forensic image

of a computer's physical hard drive. Some clients even use it to create forensic images of laptops of former employees, before they redeploy it to new employees. The tool can be deployed quickly and uses encrypted hard drives to protect ESI while in transit to a secure Ricoh facility.

Take advantage of customized, comprehensive services

Ricoh Data Forensics Solutions are just the beginning. Ricoh offers best-in-class technologies that provide customized support through the entire ESI discovery process, including every element in the Electronic Discovery Reference Model (EDRM). We offer a wide range of services, including:

- eDiscovery planning and site assessments
- Spoilation examinations
- Recreation of computer and Internet use
- Encryption bypass
- ESI search and filtering
- Deleted file recovery
- Intellectual property theft analysis
- Expert witness testimony
- Mobile lab services

Ricoh Data Forensics Solutions manages the entire ESI identification, data collection and management process to help ensure your organization is prepared for pending litigation.
